(Department of Industrial Policy and Promotion)
Central Boilers Board

New Delhi, Dated the 21st February, 2005.

Notification

G.S.R 66. - Whereas certain draft regulations further to amend the Indian Boiler Regulations, 1950 were published, as required by sub-section (1) of section 31 of the Indian Boilers Act, 1923 (5 of 1923) in the Gazette of India, dated the 9th October, 2004 vide notification of the Government of India in the Ministry of Commerce and Industry (Department of Industrial Policy and Promotion) (Central Boilers Board) number G.S.R. 341 dated the 29th September, 2004, for inviting objections and suggestions from all persons likely to be affected thereby till the expiry of the period of forty-five days from the date on which the copies of the Gazette containing the said notification were made available to the public;

And whereas, the copies of the said Gazette were made available to the public on the 25th October, 2004;

And whereas, no objections or suggestions have been received within the specified period in respect of the amendments contained in this notification;

Now, therefore, in exercise of the powers conferred by section 28 of the Indian Boilers Act, 1923, the Central Boilers Board hereby makes the following regulations further to amend the Indian Boiler Regulations, 1950, namely:-

1. (1) These regulations may be called the Indian Boiler (Second Amendment) Regulations, 2005.

(2) They shall come into force on the date of their publication in the Official Gazette.

2. In the Indian Boiler Regulations, 1950, in regulation 4, in clause (c), in sub-clause (vi), for the Note, the following Note shall be substituted, namely:-

“NOTE:- Until 33,000 hours tests are carried out by National Metallurgical Laboratory or Corporate Research and Development Laboratory of Bharat Heavy Electricals Limited for collecting elevated temperature data of alloy steel produced indigenously against ASME or BS or EN Code, these grades of steel may be accepted and long time elevated temperature properties/maximum allowable stress values given in ASME or BS or EN Code, as the case may be, may be used for the purpose of design. Provided that

(I) a certificate is furnished by the producer of the steel to the effect that the steel has been manufactured strictly in accordance with the technical

requirements of the ASME or BS or EN Code to assure that the creep rupture requirements are complied with.

(II) the Steel maker furnishes the necessary certificate that the steel conforms to the chemical analysis, room and elevated temperature mechanical properties given in ASME or BS or EN Code as the case may be.

(III) the short-term stress-rupture tests for 1000 hours as described below are carried out by NML/Steel Plants for the purpose of checking whether the steel is up to the specification and also to ensure that the Steel is capable of meeting the long-term rupture stress values/ maximum allowable stress values given in ASME or BS or EN Code, as the case may be, and a certificate is given by NML/Steel plant to this effect.

(IV) two numbers of 1000 hour creep rupture tests shall be carried out at a temperature 50°C above the service temperature for each grade of steel for tubing or piping or castings or plates grades; when in furnace and/or in superheater zone. However, the forging to be used in valves should be tested at 550°C for 1000 hours. The stress to cause rupture in 1000 hours at above temperatures may be taken from the master curve corresponding to –20% line. At this stress, a minimum rupture life of 1000 hours is expected. Both the samples should pass 1000 hour tests at the above stress and temperature. These samples may be selected at random by the Chief Inspector of Boilers of the respective State. The samples could be in the form of semi-finished products, say, forged bars of about 25mm² which will undergo heat treatment as prescribed by the relevant specifications.”
